

Wireless repair and cleaning system

The Express Yard™ system from SSG Innovations LLC allows users to manage rail repair and cleaning facility operations in real time. Data is entered into the Web-based system through a wireless, hand-held device, and it's validated automatically for accuracy against UMLER car data and AAR rules and regulations. Users can select the modules they need - including car repair, cleaning, loading, and reporting - for a more focused user interface. Website: www.expressyard.com.
