

AEI tag reader

The Express Yard™ AEI tag reader from SSG Innovations, LLC, allows users to quickly read car information and add repair data wirelessly. By simply attaching the tag reader to the Express Yard system's mobile handheld device, railroad employees can reduce errors associated with entering wrong car information and billing for it, according to SSGI. The new device also eliminates redundant data entry as users entry and validate data as operations are completed. E-mail: jgillam@ssginnovations.com; Website: www.ssginnovations.com.
